

HandsOn-3

Create a react app for Student Management Portal named scorecalculatorapp and create a function component named “CalculateScore” which will accept Name, School, Total and goal in order to calculate the average score of a student and display the same.

Implementation

→ App.js

```
import React from 'react';

import { CalculateScore } from './Components/CalculateScore';

function App() {

  return (

    <div>

      <CalculateScore

        Name="Steeve!"

        School="DNV Public School"

        total={284}

        goal={300}

      />

    </div>

  );

}

export default App;
```

→ CalculateScore.js

```
import '../Stylesheets/mystyle.css';

const percentToDecimal = (decimal) => {

  return (decimal * 100).toFixed(2) + '%';

};

const calcScore = (total, goal) => {

  return percentToDecimal(total / goal);

};
```

```
};
```

```
export const CalculateScore = ({ Name, School, total, goal }) => (
```

```
  <div className="formatstyle">
```

```
    <h1><font color="Brown">Student Details:</font></h1>
```

```
    <div className="Name">
```

```
      <b><span>Name: </span></b>
```

```
      <span>{Name}</span>
```

```
    </div>
```

```
    <div className="School">
```

```
      <b><span>School: </span></b>
```

```
      <span>{School}</span>
```

```
    </div>
```

```
    <div className="Total">
```

```
      <b><span>Total: </span></b>
```

```
      <span>{total} Marks</span>
```

```
    </div>
```

```
    <div className="Score">
```

```
      <b>Score: </b>
```

```
      <span>{calcScore(total, goal)}</span>
```

```
    </div>
```

```
  </div>
```

```
);
```

→ mystyle.css

```
.formatstyle {  
    text-align: center;  
    font-size: large;  
    padding: 20px;  
}
```

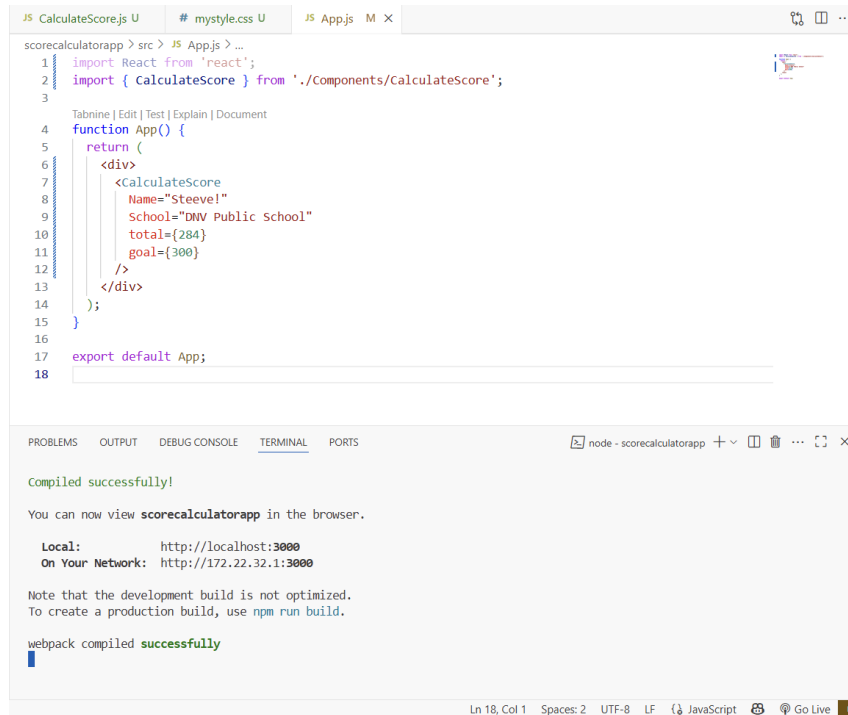

```
.Name {  
    font-weight: 300;  
    color: blue;  
    margin: 10px;  
}
```

```
.School {  
    color: crimson;  
    margin: 10px;  
}
```

```
.Total {  
    color: darkmagenta;  
    margin: 10px;  
}
```

```
.Score {  
    color: forestgreen;  
    margin: 10px;  
}
```

Output

The screenshot shows a VS Code editor with two tabs: 'JS CalculateScore.js U' and '# mystyle.css U'. The 'CalculateScore.js' file is open, showing a React component named 'App'. The component imports 'React' and 'CalculateScore' from local files. It defines a function 'App()' that returns a JSX element. The JSX element is a 'div' containing a 'CalculateScore' component. The 'CalculateScore' component is passed props: 'Name="Steeve"', 'School="DMV Public School"', 'total={284}', and 'goal={300}'. The terminal output shows the command 'node - scorecalculatorapp' being executed, which results in 'Compiled successfully!'. It also provides the local and network URLs for viewing the application in a browser: 'http://localhost:3000' and 'http://172.22.32.1:3000'. A note mentions that the development build is not optimized and suggests using 'npm run build' for a production build. The terminal also shows 'webpack compiled successfully'.

```
scorecalculatorapp > src > JS App.js > ...
1 import React from 'react';
2 import { CalculateScore } from './Components/CalculateScore';
3
4 function App() {
5   return (
6     <div>
7       <CalculateScore
8         Name="Steeve"
9         School="DMV Public School"
10        total={284}
11        goal={300}
12      />
13    </div>
14  );
15 }
16
17 export default App;
18
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

node - scorecalculatorapp

Compiled successfully!

You can now view **scorecalculatorapp** in the browser.

Local: http://localhost:3000
On Your Network: http://172.22.32.1:3000

Note that the development build is not optimized.
To create a production build, use `npm run build`.

webpack compiled **successfully**

The screenshot shows a VS Code editor with three tabs: 'JS CalculateScore.js U', '# mystyle.css U', and 'JS App.js M'. The 'CalculateScore.js' file is open, showing a React component named 'CalculateScore'. The component imports 'formatstyle' from a local file. It defines two functions: 'percentToDecimal' and 'calcScore'. 'percentToDecimal' takes a 'decimal' argument and returns a string representing the percentage. 'calcScore' takes 'total' and 'goal' arguments and returns the result of 'percentToDecimal' applied to 'total / goal'. The component is exported as 'CalculateScore'. The JSX element is a 'div' with 'className="formatstyle"'. It contains a 'h1' with 'Student Details:', a 'div' with 'Name' and 'School' labels and values, and a 'div' with 'Total' and 'Score' labels and values. The 'Score' label is followed by a 'span' containing the result of 'calcScore'.

```
scorecalculatorapp > src > Components > JS CalculateScore.js > CalculateScore
1 import './Stylesheets/mystyle.css';
2
