

HandsOn-10

Create a React Application named “officespacerentalapp” which uses React JSX to create elements, attributes and renders DOM to display the page.

Implementation

→App.js

```
// src/App.js
```

```
import React from "react";
```

```
import OfficeCard from "../components/OfficeCard";
```

```
import "../App.css";
```

```
const officeList = [
```

```
{
```

```
  id: 1,
```

```
  name: "TechZone Office",
```

```
  address: "Gachibowli, Hyderabad",
```

```
  rent: 75000,
```

```
  image: "https://nslinfratech.com/wp-content/uploads/2023/09/Overview-3-2.jpg"
```

```
},
```

```
{
```

```
  id: 2,
```

```
  name: "GreenHub",
```

```
  address: "Kondapur, Hyderabad",
```

```
  rent: 65000,
```

```
  image: "https://amazingarchitecture.com/storage/680/responsive-images/The-Green-Hub-Angeliki-Tzifa-Sofia-Nikolaidou-Amazing-Architecture___media_library_original_1400_787.jpg"
```

```
},
```

```
{
```

```

    id: 3,
    name: "BizNest",
    address: "Madhapur, Hyderabad",
    rent: 90000,
    image: "https://m.media-amazon.com/images/I/51XZeOMk85L._AC_SY355_.jpg"
  }
];

```

```

function App() {
  return (
    <div className="app-container">
      <h2 className="main-heading">Office Space Rentals</h2>
      {officeList.map((office) => (
        <OfficeCard key={office.id} office={office} />
      ))}
    </div>
  );
}
export default App;

```

→ App.css

```

/* src/App.css */
.app-container {
  padding: 20px;
}
.main-heading {
  text-align: left;
  margin-bottom: 20px;
  color: darkgreen;
}

```

→OfficeCard.js

```
// src/components/OfficeCard.js

import React from "react";
import "./OfficeCard.css"; // We'll define this style below

const OfficeCard = ({ office }) => {
  return (
    <div className="office-card">
      <img src={office.image} alt={office.name} className="office-image" />
      <div className="office-details">
        <h3>{office.name}</h3>
        <p><strong>Address:</strong> {office.address}</p>
        <p><strong>Rent:</strong> ₹{office.rent}</p>
      </div>
    </div>
  );
};

export default OfficeCard;
```

→OfficeCard.css

```
/* src/components/OfficeCard.css */

.office-card {
  display: flex;
  align-items: center;
  border: 1px solid #ccc;
  border-radius: 8px;
  margin: 12px;
  padding: 12px;
  box-shadow: 0 2px 6px rgba(0, 0, 0, 0.1);
  max-width: 600px;
}
```

```
.office-image {  
  width: 150px;  
  height: 100px;  
  object-fit: cover;  
  border-radius: 5px;  
  margin-right: 16px;  
}  
.office-details h3 {  
  margin: 0;  
  color: #003366;  
}  
.office-details p {  
  margin: 4px 0;  
}
```

Output

```
JS App.js M # App.css M JS OfficeCard.js U X # OfficeCard.css U
officespacereentalapp > src > components > JS OfficeCard.js > ...
1 // src/components/OfficeCard.js
2 import React from "react";
3 import "../OfficeCard.css"; // We'll define this style below
4
5 Tabnine | Edit | Explain
6 const OfficeCard = ({ office }) => {
7   return (
8     <div className="office-card">
9       <img src={office.image} alt={office.name} className="office-image" />
10      <div className="office-details">
11        <h3>{office.name}</h3>
12        <p><strong>Address:</strong> {office.address}</p>
13        <p><strong>Rent:</strong> ₹{office.rent}</p>
14      </div>
15    </div>
16  );
17 }
18 export default OfficeCard;
19
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

node - officespacereentalapp

You can now view **officespacereentalapp** in the browser.

Local: http://localhost:3000
On Your Network: http://172.22.32.1:3000

Note that the development build is not optimized.
To create a production build, use **npm run build**.

webpack compiled **successfully**
