

HandsOn-13

Create a React App named “bloggerapp” in with 3 components.

1. Book Details
2. Blog Details
3. Course Details

.

Implementation

→App.js

```
import React from 'react';
import './App.css';
import CourseDetails from
'./components/CourseDetails';
import BookDetails from './components/BookDetails';
import BlogDetails from './components/BlogDetails';
function App() {
  return (
    <div className="container">
      <CourseDetails />
      <BookDetails />
      <BlogDetails />
    </div>
  );
}
export default App;
```

→App.css

```
.container {
  display: flex;
```

```
justify-content: space-around;
padding: 30px;
font-family: Arial, sans-serif;
}
.box {
border-left: 4px solid green;
padding-left: 20px;
}
```

→BlogDetails.js

```
import React from 'react';
function BlogDetails() {
  return (
    <div className="box">
      <h2>Blog Details</h2>
      <p><b>React Learning</b></p>
      <p><i>Stephen Biz</i></p>
      <p>Welcome to learning React!</p>

      <p><b>Installation</b></p>
      <p><i>Schwezdneier</i></p>
      <p>You can install React from npm.</p>
    </div>
  );
}
export default BlogDetails;
```

→BookDetails.js

```
import React from 'react';
function BookDetails() {
```

```

return (
  <div className="box">
    <h2>Book Details</h2>
    <p><b>Master React</b></p>
    <p>670</p>
    <p><b>Deep Dive into Angular 11</b></p>
    <p>800</p>
    <p><b>Mongo Essentials</b></p>
    <p>450</p>
  </div>
);
}
export default BookDetails;

```

→CourseDetails.js

```

import React from 'react';
function CourseDetails() {
  return (
    <div className="box">
      <h2>Course Details</h2>
      <p><b>Angular</b></p>
      <p>4/5/2021</p>
      <p><b>React</b></p>
      <p>6/3/2020</p>
    </div>
  );
}
export default CourseDetails;

```

Output

```
JS BookDetails.js U JS BlogDetails.js U # App.css M JS CourseDetails.js U JS App.js M X
bloggerapp > src > JS App.js > default
1 import React from 'react';
2 import './App.css';
3 import CourseDetails from './components/CourseDetails';
4 import BookDetails from './components/BookDetails';
5 import BlogDetails from './components/BlogDetails';
6
7 function App() {
8   return (
9     <div className="container">
10       <CourseDetails />
11       <BookDetails />
12       <BlogDetails />
13     </div>
14   );
15 }
16
17 export default App;
18
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

You can now view **bloggerapp** in the browser.

Local: http://localhost:3000
On Your Network: http://172.22.32.1:3000

Note that the development build is not optimized.
To create a production build, use `npm run build`.

webpack compiled **successfully**
