

HandsOn-5

Please follow the instructions to complete the hands-on. Each instruction expects a command for the Git Bash.

1. Verify if master is in clean state.
2. List out all the available branches.
3. Pull the remote git repository to the master
4. Push the changes, which are pending from “**Git-T03-HOL_002**” to the remote repository.
5. Observe if the changes are reflected in the remote repository.

Commands to add in created Repo

git status

- Shows the current state of your working directory and staging area.
 - Displays untracked, modified, or staged files.
 - Helps you know what changes are pending before committing or pushing.
-

git branch -a

- Lists all branches available to you.
 - Shows both local branches and remote-tracking branches.
 - Useful to see where you can switch or push changes.
-

git checkout master

- Switches your working directory to the master branch.
 - Ensures you are working on or updating the correct branch.
-

git pull origin master

- Fetches the latest commits from the remote master branch and merges them into your local master.

- Keeps your local master up-to-date with remote changes.
-

git checkout Git-T03-HOL_002

- Switches to the branch named Git-T03-HOL_002 where you want to work or push changes.
-

git add .

- Stages all changed and new files in the current directory and its subdirectories.
 - Prepares files to be committed.
-

git commit -m "Your descriptive commit message"

- Creates a new commit with the staged changes.
 - The message should clearly describe what changes were made.
-

git push origin Git-T03-HOL_002

- Uploads your committed changes on branch Git-T03-HOL_002 to the remote repository.
 - Makes your local commits visible to others and stored remotely.
-

git fetch origin

- Downloads updates from the remote repository without merging.
 - Updates your remote-tracking branches.
-

git log origin/Git-T03-HOL_002 --oneline

- Shows a concise, one-line-per-commit log of the remote branch Git-T03-HOL_002.
- Helps verify what commits exist on the remote branch.

Output Screens:
